

Outdoor Seatings

- Solid Construction
- Designed with flair
- Environmentally integrated
- Structurally certified

Outdoor Structures Australia (OSA) has developed a range of “outdoor” furniture that encompasses style and functionality. Using our intimate knowledge of timbers and their individual properties, we have created settings that maintain their performance through a wide range of environmental conditions without losing any of the natural features intrinsic in timber.

In addition to our own designs, prominent landscape architects have also understood the value of natural materials and their designs have been creatively realized by **OSA**.

OSA has the flexibility and knowledge to ensure that design ideas can be effectively constructed, and offers this capability to other potential designers.

All our products are manufactured to conform to current standards, in our facilities and manufactured in our Gatton facilities.

You are most welcome to discuss your design needs at any time. Please contact us at:
