TO WHOM IT MAY CONCERN

HARDWOOD TIMBER SUPPLY – OUTDOOR STRUCTURES AUSTRALIA (OSA)

I have known Ted Stubbersfield for ten (10) years, in fact from when OSA was known as Gatton Sawmilling.

Ted has improved the way we are able to operate as Landscape Architects in the following significant ways:

- We have access to informed and experienced advice on Australian hardwoods for outdoor applications.
- He collaborates with us to achieve innovative applications of timber in our outdoor structures, playgrounds, wetland boardwalks, and outdoor furniture.
- We can rely on a faithful interpretation of our designs and protection of our copyright of the design.
- OSA's timber is stable and durable: it does not crack, warp, rot, or shrink too much and is resistant to termite attack.
- It gives our projects a quintessential Australian appearance.
- We work closely with OSA in the design of our timber constructions and we can be confident that the timber is sourced responsibly, meeting our criteria for sustainability.

Yours faithfully,

Fiona Robbé, AAILA
Landscape Architect
